

Mental model questions

29/04/2025

1. What is asynchronous programming in JavaScript?
2. What is a promise in JavaScript?
3. What happens when you use **setInterval** instead of **setTimeout**? How does **setInterval** stop?
4. What is an aggregate error?
5. How can you handle multiple promises?
6. What is async & await, and what happens when await is not used?
7. What are microtasks & macrotasks?
8. What is the parallel request & server requests?
9. What happens when, in promise chaining, you forget to return?
10. What happens when you resolve & reject at the same time?
11. What is the difference between using async & await versus using promises?
12. What is AJAX in full? What does it do?
13. What are asynchronous iterators?
14. What is starvation of the callback queue?
15. What happens when you return a promise inside the then()?
16. Can a promise be stopped?
